GUIDELINES FOR FOODBORNE DISEASE OUTBREAK RESPONSE

THIRD EDITION

The CIFOR Guidelines are a comprehensive source of information on foodborne disease investigation and control for local, state and federal health agencies.

The Guidelines describe:

- The overall approach to addressing foodborne disease outbreaks, including preparation, detection, investigation, control and follow-up.
- The roles of key organizations in foodborne disease outbreaks.

Download the new Guidelines for free:

Flip to see what's new in the Third Edition 

NEW in the CIFOR Guidelines Third Edition

Extremely streamlined and easy to read

Highlights Whole Genome Sequencing and Culture-Independent Diagnostic Testing

Better illustrates how epidemiology, lab, and environmental health data come together

Highlights importance of environmental assessments

Provides information on the value and use of complaint systems

Highlights importance of epidemiology data:

- Recommends routine interviewing to collect detailed exposure information
- Expands effective models of sub-cluster investigations and product tracebacks

CIFOR is a multidisciplinary collaboration of national associations and federal agencies working together since 2006 to improve methods to detect, investigate, control and prevent foodborne disease outbreaks.
