

LimsNet Sample Submission

LimsNet is the ISDH Laboratories' web-based submission system that allows sample submitters to enter data electronically rather than on paper forms, and receive laboratory results electronically and in real-time. The submitter enters sample and demographic information into the secure website, prints the list, and sends it along with the specimen(s). The life of the specimen in our laboratory can be tracked from receipt to final test result.

The benefits of using LimsNet are:

1. Many fields are pre-filled, meaning less entry time.
2. Reduced error rate.
3. View, print, or save reports as PDF files.
4. Never misplace a report: Reports are archived on LimsNet for years.
5. Multisite access.
6. Best of all: **Faster test results!** Reports are available on LimsNet the minute they are released at the ISDH Laboratories.

Currently, the ISDH Laboratories should receive submissions through LimsNet for the following assays from authorized submitters:

1. Syphilis, HIV, Hepatitis B and C
2. Virology (Influenza, Measles, Mumps, Respiratory Viruses, etc.)
3. Blood Lead
4. Rabies
5. Tuberculosis
6. Enteric testing (Salmonella, Shigella, E. coli, and Campylobacter)
7. Pertussis
8. Chlamydia, Gonorrhea
9. Potential Biothreat agents
10. CP-CRE
11. Zika Virus

ISDH Laboratories will continue to add capabilities to accept samples for a broader range of tests and will do their best to notify submitters when these capabilities are added. Here is the link to the LimsNet website, where you can find contact information for the LimsNet Help Desk:

<http://LimsNet.isdh.in.gov/>.

For many of our test offerings, your facility must be pre-authorized to submit samples for testing.
