Using the Power of Epidemiology

What is CSTE Learn?

CSTE Learn is the Council of State and Territorial Epidemiologists' (CSTE) online training center for applied epidemiologists. This new platform is a one-stop shop for epidemiologists who seek the latest CSTE events, courses and resources for their professional development and training needs. CSTE members and consultants develop the training resources available at CSTE Learn, including on-demand webinars and courses on topics like informatics, evaluation, opioid surveillance and more. As new trainings and educational offerings become available, these materials will be added to CSTE Learn. In addition, many in-person CSTE meetings and trainings have transitioned to virtual formats, and CSTE Learn will be the clearinghouse to access these online events and courses.

We welcome you to enroll in a course, register for an event, or find resources to start using CSTE Learn today! To learn more about CSTE or to become a member, please visit <https://www.cste.org/page/JoinCSTE>.
