

Description

Mission

Our mission is to engage the syndromic Community of Practice to identify and address syndromic data quality issues and concerns through thoughtful discussion and the inclusion of outside stakeholders. We strive to foster relationships between all groups with a hand in syndromic messaging in order to better syndromic surveillance practice for everyone.

Activity Highlights

- Monthly webinars where we cover data quality related topics and activities identified through other community discussions, forum activity, or communications with committee chairs
- Serve as platform for communications between syndromic Community of Practice, EHR vendor representatives, and NSSP team
- Open mic discussions where community members bring current concerns/issues to the group

Benefits to Participation

Why Participate?

The DQC is a great way to group brainstorm DQ issues you might be experiencing or to get feedback on how to approach a problem. Our membership includes individuals well-versed in resolving data quality issues willing to help. We often have more leverage asking for resolutions from EHR vendors as a group than by ourselves.

How You Can Contribute

Attend our monthly webinars! Participate in our open mic sessions. You can also post questions in our [group forums](#) and e-mail the group representatives if you would like a topic to be added to the next agenda.
