Council of State and Territorial Epidemiologists

- 1. Background**
- 2. Overview of Default Content**
- 3. Default Content for Pertussis**
- 4. Sample Jurisdiction Specific Criteria for Pertussis**
- 5. Collecting Jurisdiction Specific Criteria**

# The RCKMS Project

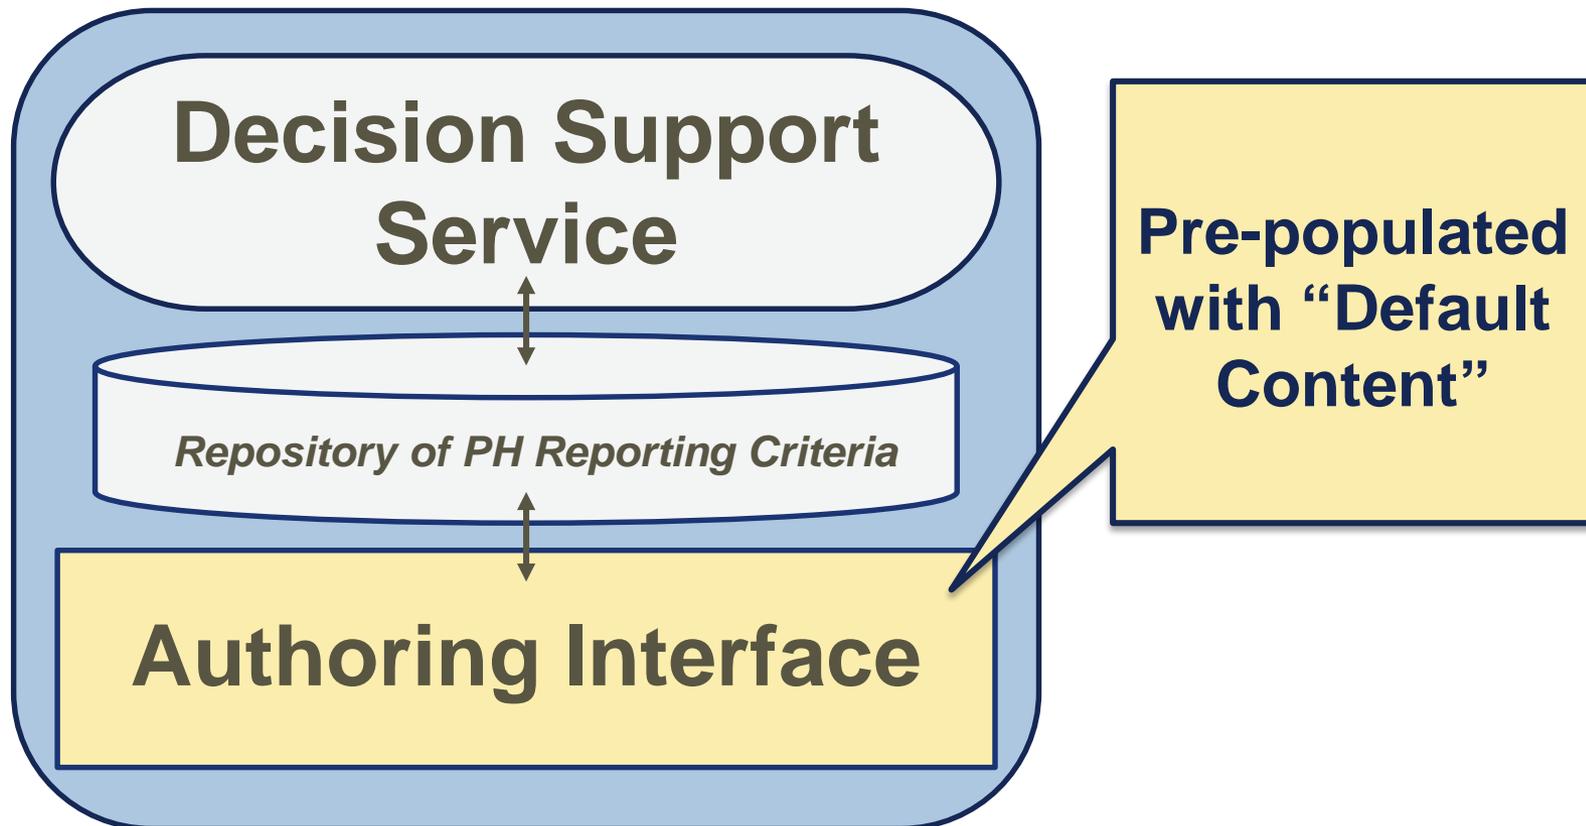

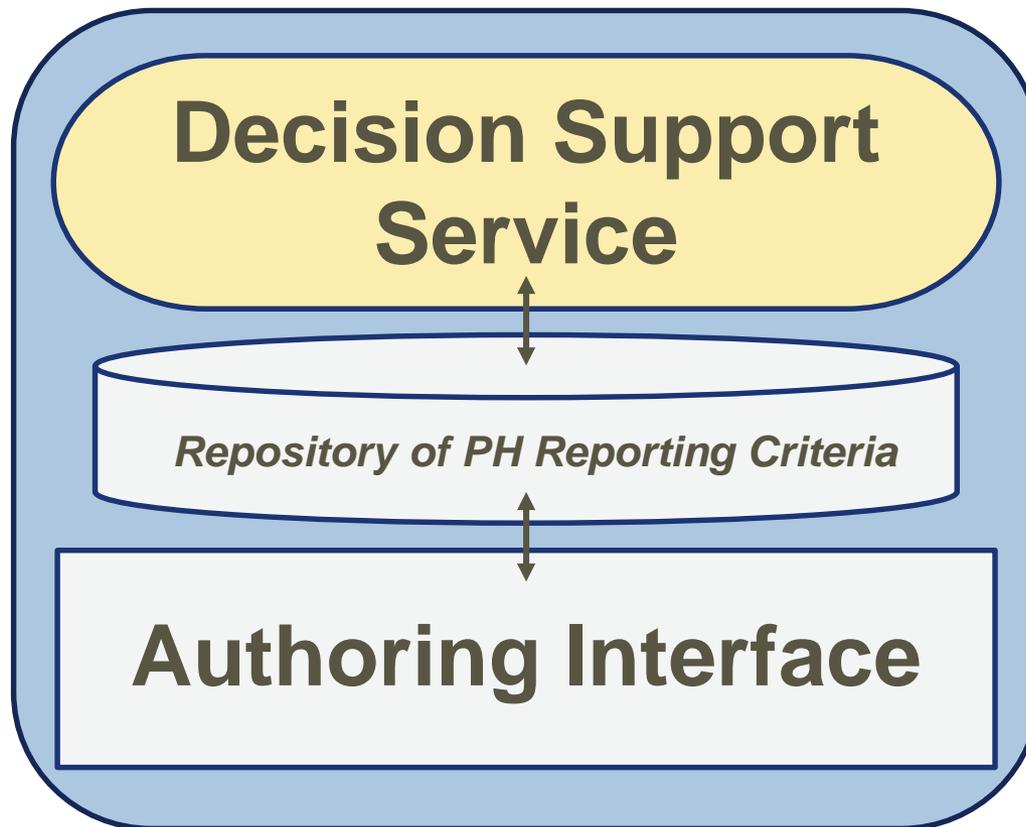

RCKMS stands for:

**Reportable Conditions Knowledge  
Management System**

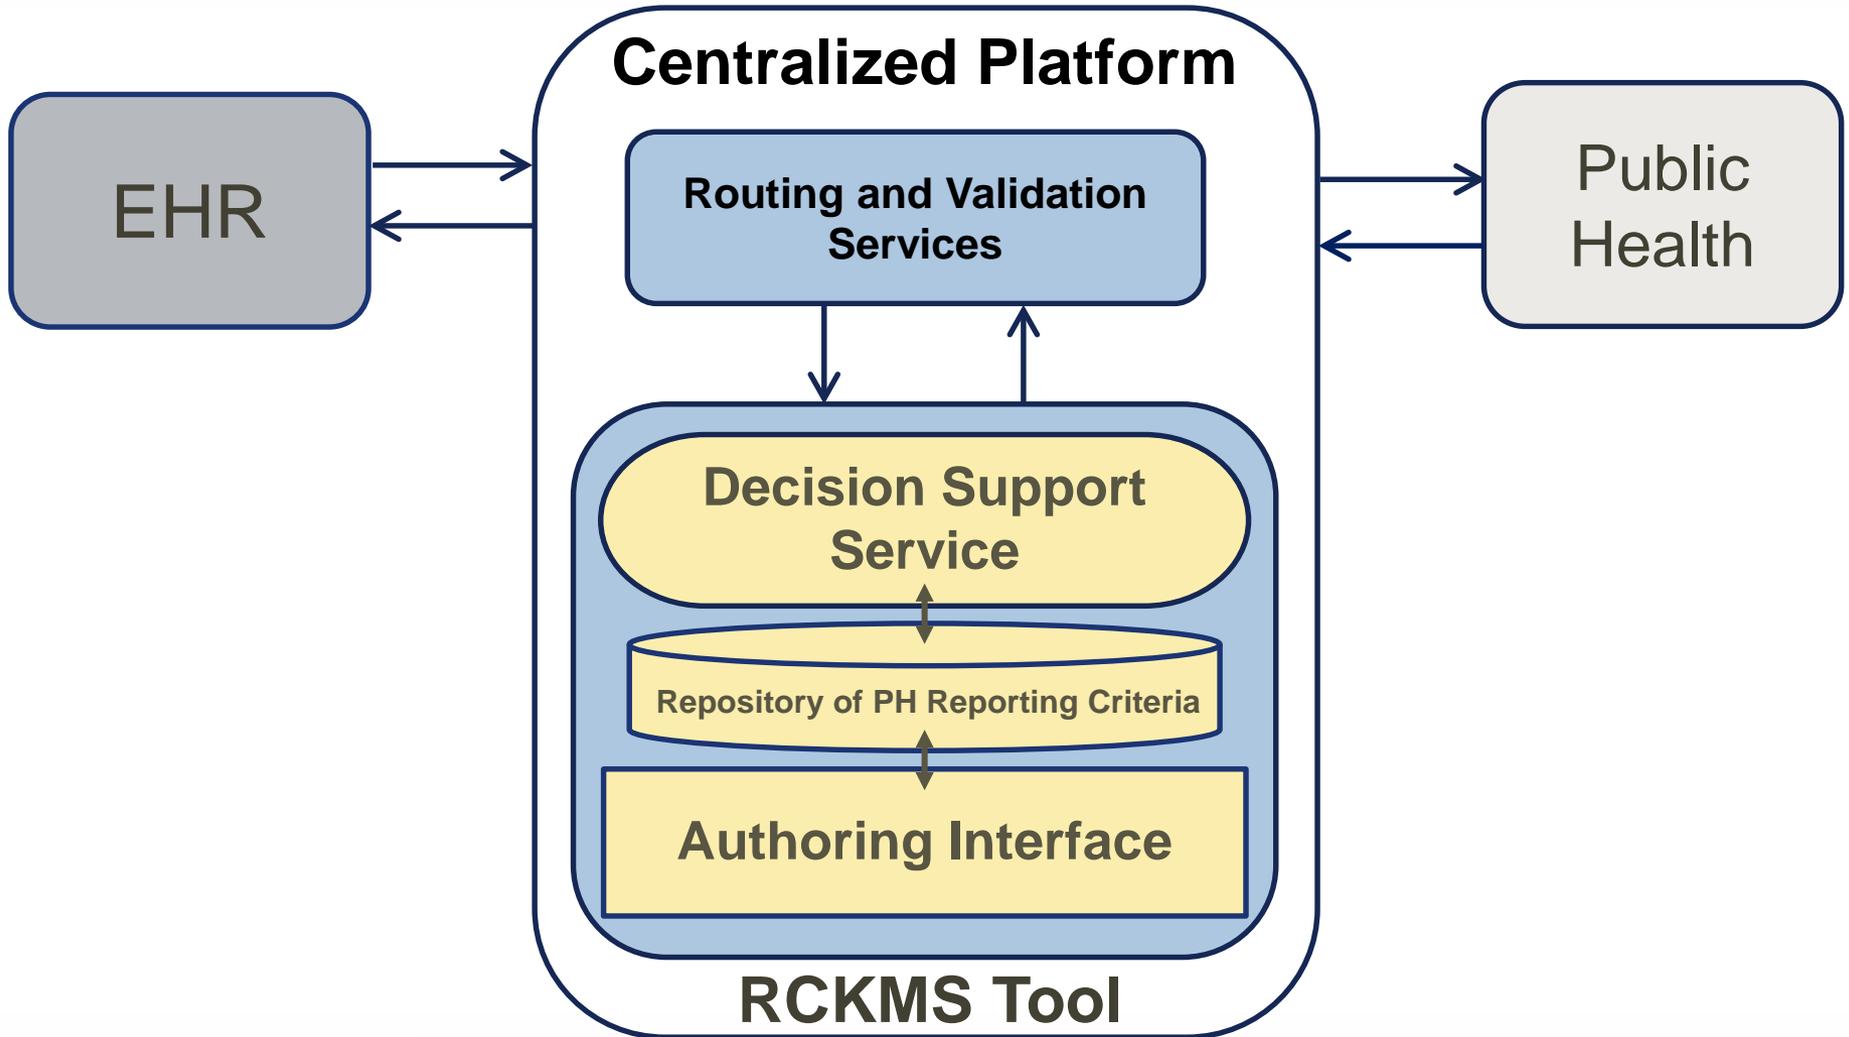

The RCKMS is:

an authoritative, real-time portal to enhance disease surveillance, by providing comprehensive information to reporters (and PH) about the “who, what, where, when, why, and how” of case reporting.

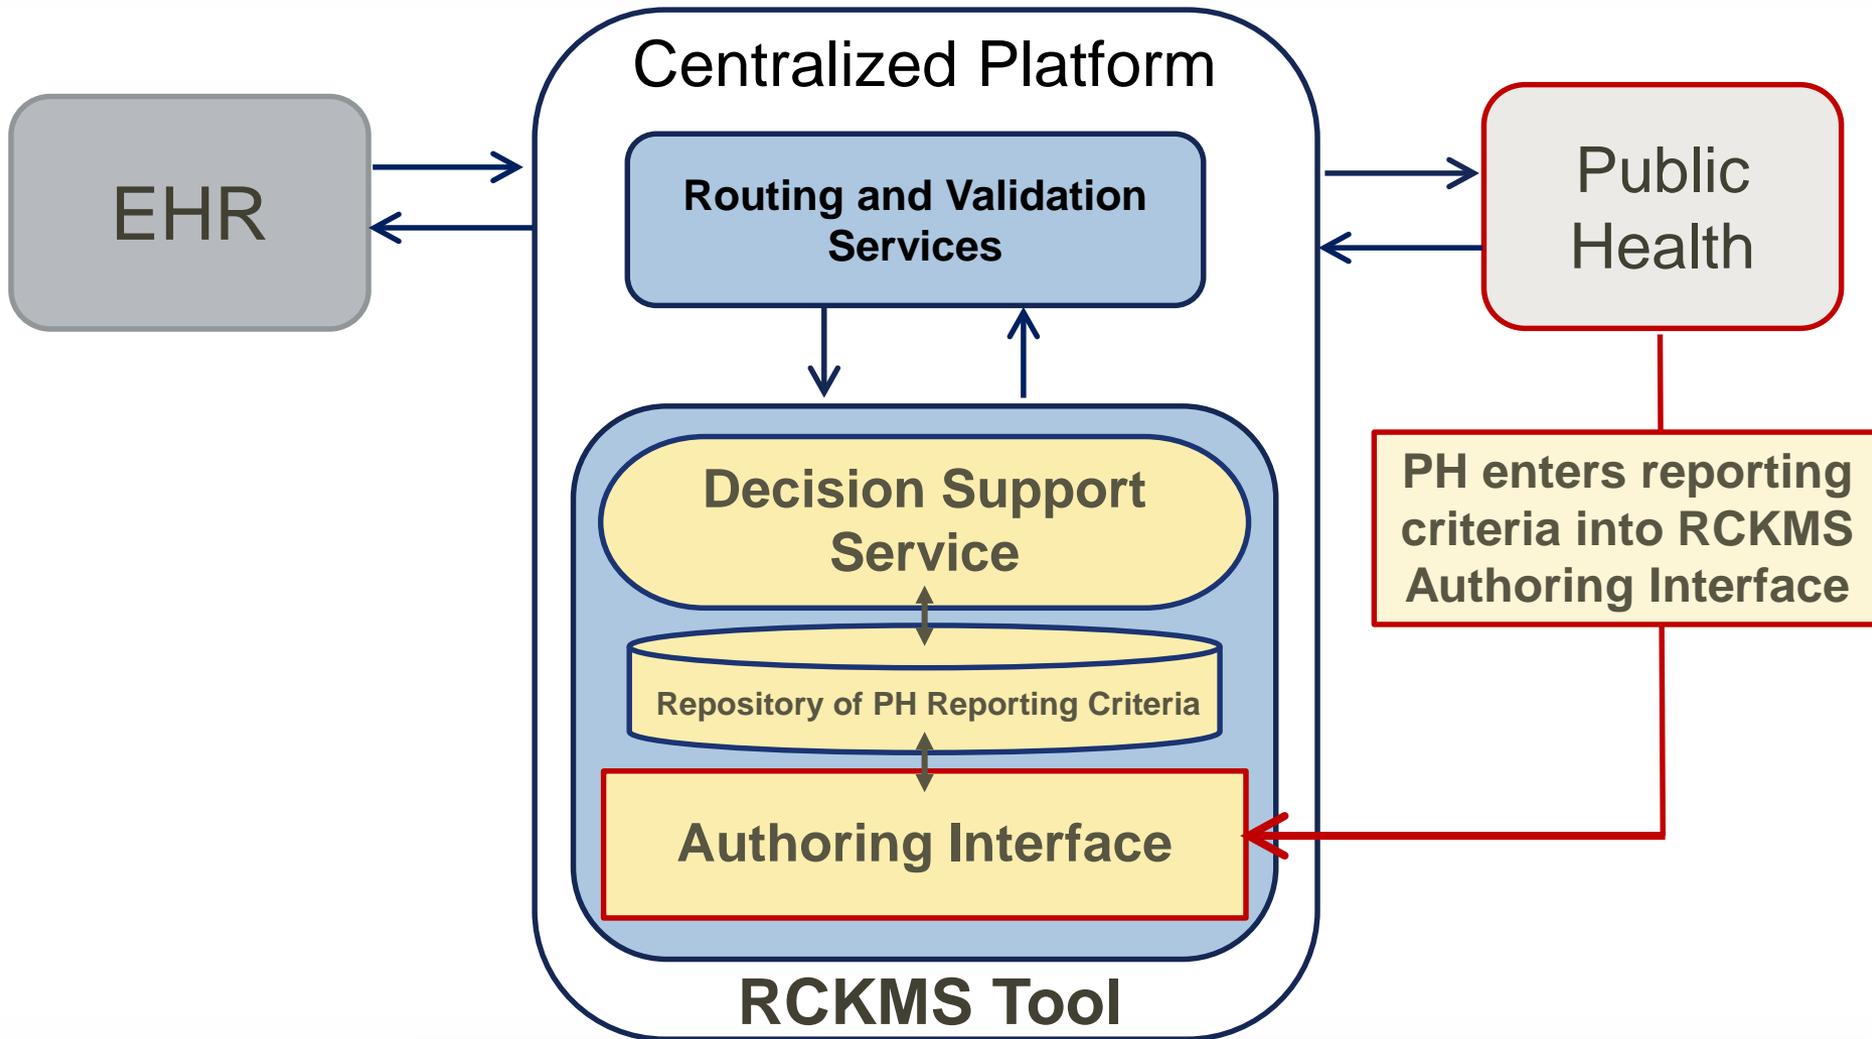

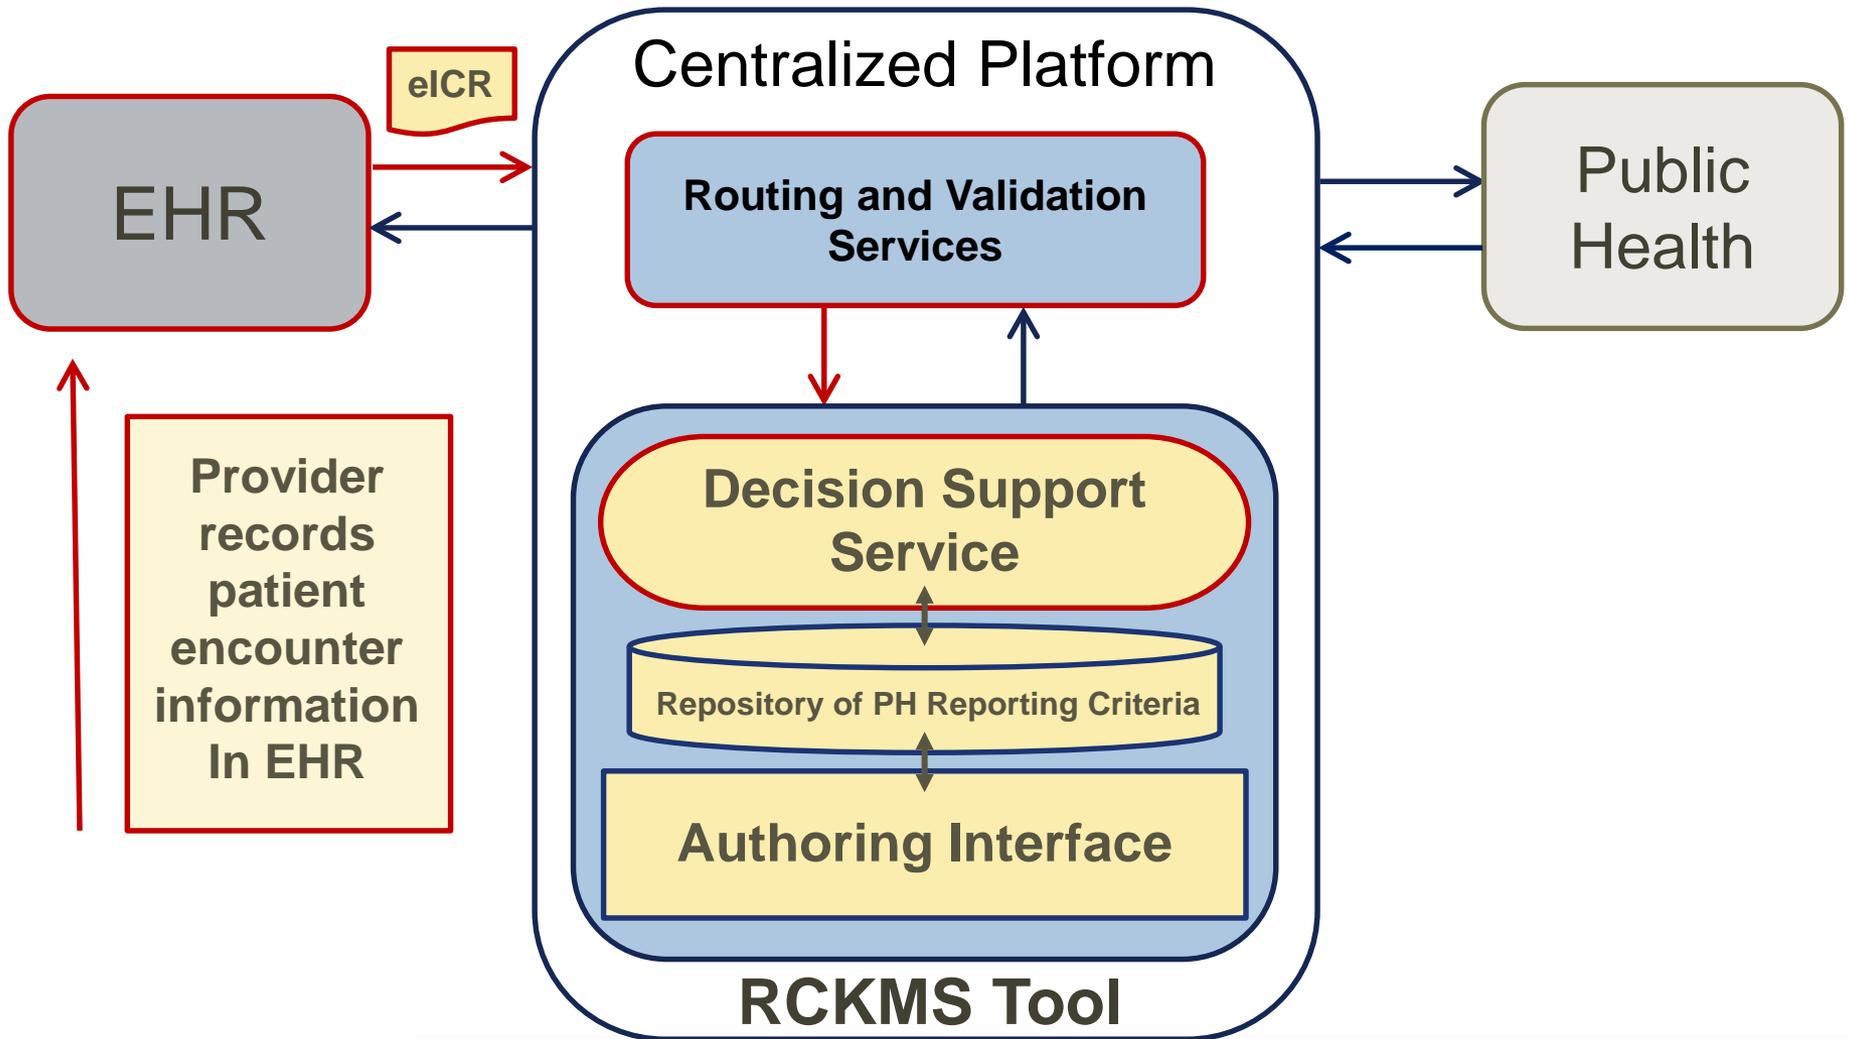

# RCKMS and Electronic Case Reporting (eCR)

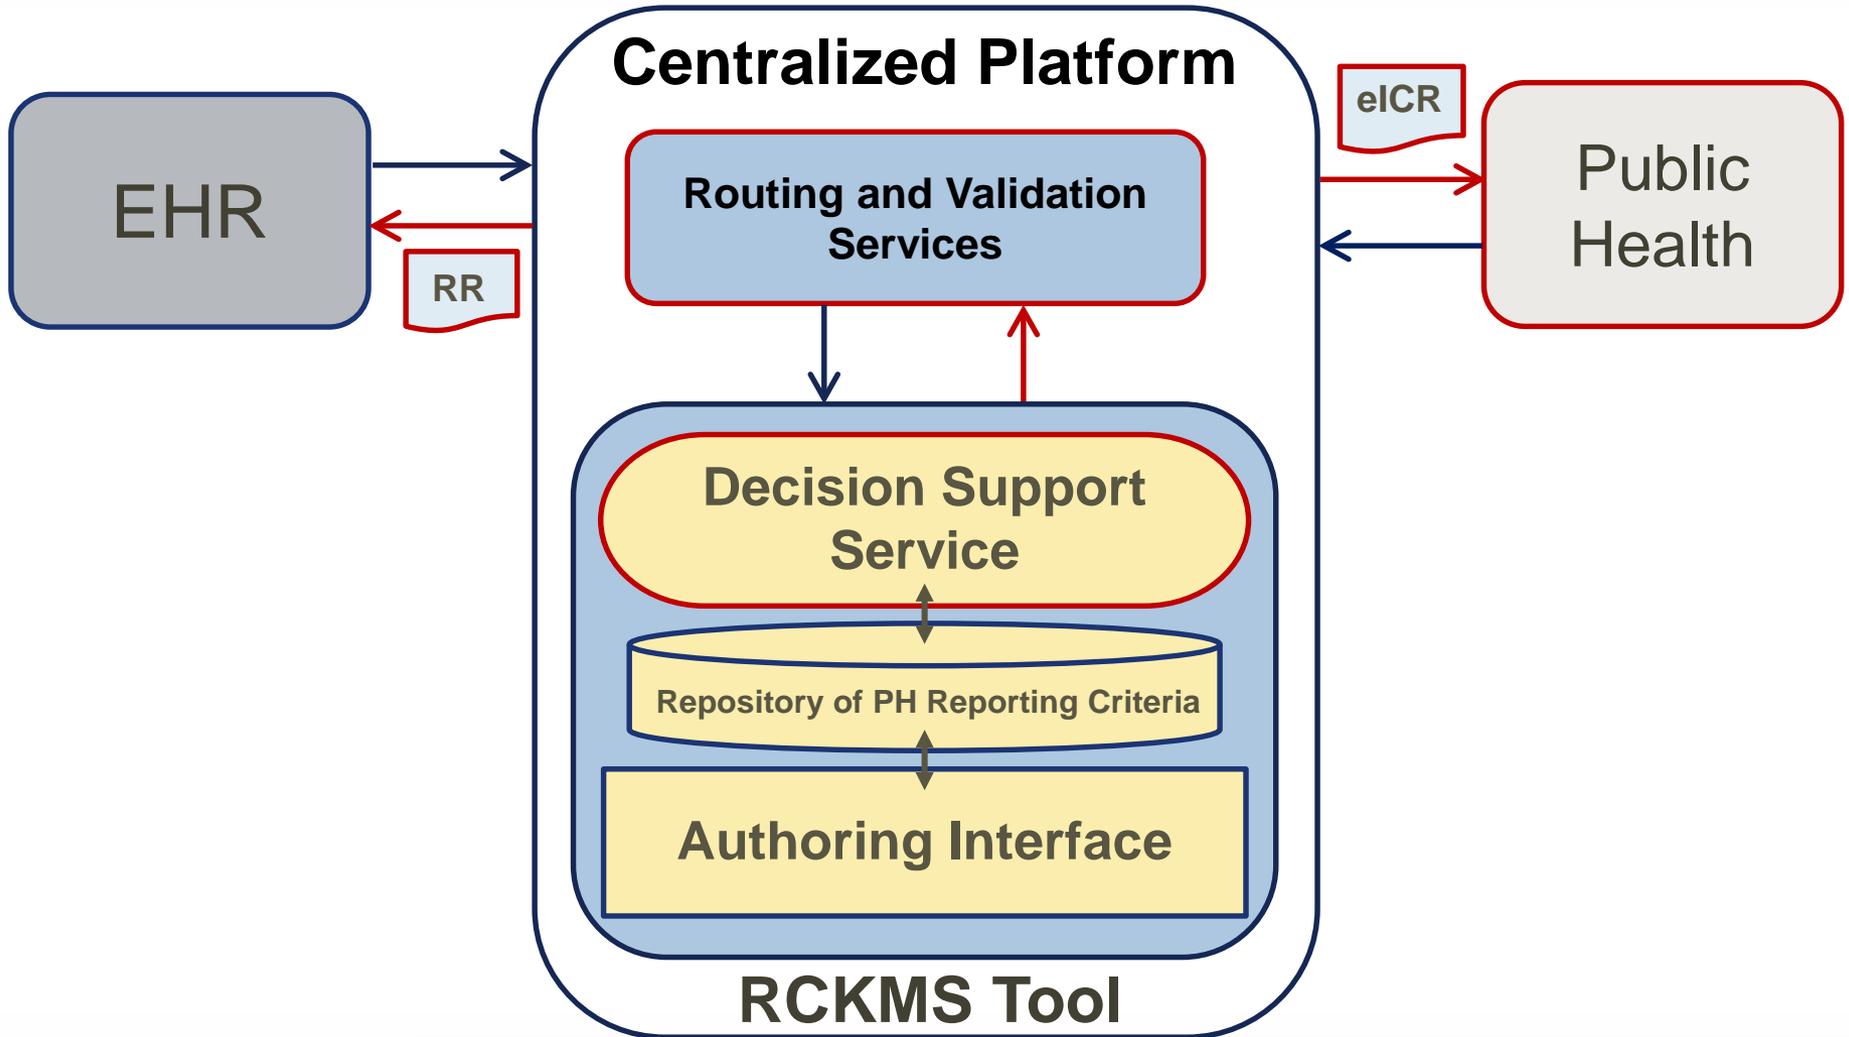

# How RCKMS works

# How RCKMS works

# How RCKMS works

# Phased Development

- **Phase 1, Feasibility Demonstration Pilot**
  - Fall 2014 – Fall 2015
  - Proof of concept
  - Processes for content development
- **Phase 2, Application and Content Development**
  - Fall 2015 – September 2016
  - Deployment of the RCKMS application on centralized platform
  - Default content for a subset of reportable conditions
- **Phase 3, Training and Deployment**
  - Finalize and implement content into the RCKMS application
  - Pilot release of RCKMS application
  - Train jurisdictions to use the RCKMS application

# Overview of Default Content

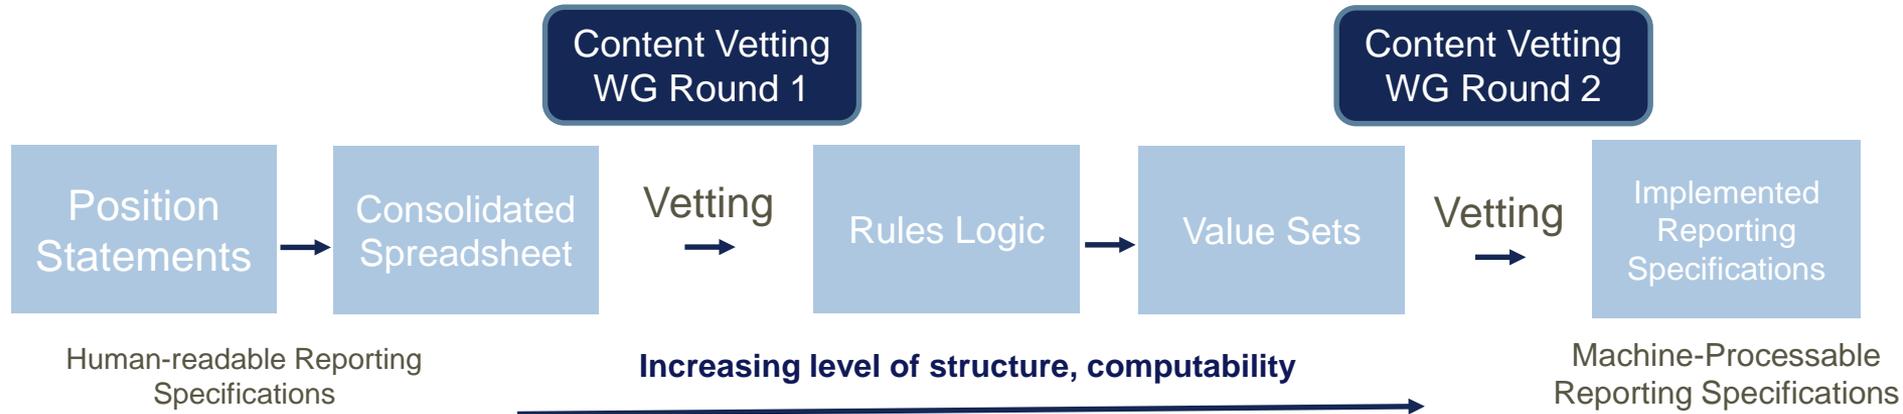

# RCKMS Content Development Process

## Default Content

- Reporting specifications for each condition that comes pre-populated in RCKMS tool
- Purpose: To ease the burden of entering reporting specifications into tool
- Machine-processable, developed through standardized process

## Development Process

# Content Development Process: Position Statements

## A. Narrative description of criteria to determine whether a case should be reported to public health authorities

Report any illness to public health authorities that meets any of the following criteria:

1. An acute cough illness of any duration with an inspiratory whoop
2. Any person with isolation of *Bordetella pertussis* from a clinical specimen or a positive PCR test for *B. pertussis*
3. Any cough illness greater than 2 weeks duration in a person who is a contact of a laboratory-confirmed pertussis case.
4. Any cough illness greater than 2 weeks duration in a person who is a member of a defined risk group during an outbreak.
5. A person whose healthcare record contains a diagnosis of pertussis.
6. A person whose death certificate lists pertussis as a cause of death or a significant condition contributing to death.

### Other recommended reporting procedures

- All cases of pertussis should be reported.
- Reporting should be on-going and routine.
- Frequency of reporting should follow the state health department's routine schedule.

## B. Table of criteria to determine whether a case should be reported to public health authorities

**Table VI-B.** Table of criteria to determine whether a case should be reported to public health authorities. Requirements for reporting are established under State and Territorial laws and/or regulations and may differ from jurisdiction to jurisdiction. These criteria are suggested as a standard approach to identifying cases of this condition for purposes of reporting, but reporting should follow State and Territorial law/regulation if any conflicts occur between these criteria and those laws/regulations.

Criterion	Reporting			
<i>Clinical Evidence</i>				
Cough (any duration)	N			
Cough > 2 weeks duration			N	
Inspiratory whoop	N			
Healthcare record contains a diagnosis of pertussis				S
Death certificate lists pertussis as a cause of death or a significant condition contributing to death				S
<i>Laboratory Evidence</i>				
Isolation of <i>Bordetella pertussis</i> from a clinical specimen		S		
Positive PCR for <i>B. pertussis</i>		S		
<i>Epidemiologic Evidence</i>				
Contact with a laboratory-confirmed pertussis case			O	
Member of a defined risk group during an outbreak			O

  - Lab reporting (stand alone labs)
  - Provider/Facility Reporting (includes hospitals/ambulatory and onsite labs)
  - Vital Records (future implementation)

*For the purposes of this exercise, we recommend jurisdictions use these three default reporter types. Are there other reporter types your jurisdiction would want?*
- Review list of criteria available (Column A) for each category (ie. clinical, laboratory, demographic, etc.)**
- Review default logic sets**
- Identify any missing criteria or combinations of criteria (i.e., logic sets) needed** - Are there any clinical, laboratory, demographic, epidemiologic or vital records criteria missing from this list, that are needed for your jurisdiction reporting criteria?
  - Are there any new combinations of criteria (i.e., logic sets) needed?
  - Ex. New logic set needed for a combination of DEM+CLIN criteria
- Navigate to your jurisdiction specific tab and complete the following:**
- If your jurisdiction would like to use the DEFAULT criteria, indicate a Y in the peach box above next to "Use Default?"**
- If your jurisdiction would like to edit the default criteria, make edits as needed**
  - Indicate all edits by highlighting the cell in YELLOW
  - Types of Edits*
    - Edit existing logic sets
    - Add new row of criteria
    - Add new logic set
  - Indicate all changes under "Notes"
  - Answer applicable questions for your jurisdiction in the the yellow box or notes box.
  - See EXAMPLE (Completed) tab for example

Criterion Description	Status	DEFAULT - LOGIC SETS				Vital Records
		Lab Reporting	Provider / Facility Reporting			
		(1) LAB	(2) DX	(3) CLIN	(4) CLIN + EPI	
<i>Patient record being evaluated contains evidence of:</i>						
<b>Clinical</b>	C					
Pertussis (i.e., as a diagnosis or active problem)	D		S			
Cough (any duration)	N;D			N	N	
Inspiratory Whoop	D			N		
<b>Laboratory</b>	C					
Identification of <i>Bordetella pertussis</i> by culture method in a clinical specimen, including identification tests performed on an isolate	D	S	S			
Detection of <i>Bordetella pertussis</i> nucleic acid by any method in a clinical specimen	D	S	S			
Detection of antibodies to <i>Bordetella pertussis</i> toxin by any method in a clinical specimen	D	S	S			
<b>Demographic</b>	C					
<b>Epidemiologic</b>	C					
Contact of a person diagnosed with pertussis	D				O	
Member of a defined risk group during an outbreak	N;D				O	
<b>Vital Records</b>	C					
Death certificate lists pertussis as a cause of death or a significant condition contributing to death	N;D					S

Key for Status Column:

**C = Category:** Category of criteria, ex., clinical, laboratory, demographic, epidemiologic, vital records

**N = National Criteria:** National criteria for case reporting, taken from Section 6/Table 6B of CSTE Position Statement

**D = Default Criteria:** Reporting criteria included in Default

**J = Jurisdiction Specific Criteria:** Reporting criteria not in the Default, but available for jurisdiction to use

Key for Reporting Criteria (taken from PS)

**S = Sufficient:** Criterion alone is sufficient to report a case

**N = Necessary:** Criteria in conjunction with all other "N" and any "O" criteria in the same column is required to report a case

**O = Optional:** At least one of these "O" criteria in each category in the same column-- in conjunction with all other "N" criteria in the same column-- is required to report a case

**OptAv= This option is available for a jurisdiction to include in their jurisdictional rules. It is not required to select all or none.**

**USE DEFAULT?**  
Indicate Y/N in Box

Jurisdiction:

Instructions:

**1. Review Types of Reporters**  
*Default Reporter Types:*  
 - Lab reporting (stand alone labs)  
 - Provider/Facility Reporting (includes hospitals/ambulatory and onsite labs)  
 - Vital Records (future implementation)

*For the purposes of this exercise, we recommend jurisdictions use these three default reporter types. Are there other reporter types your jurisdiction would want?*

**2. Review list of criteria available (Column A) for each category (ie. clinical, laboratory, demographic, etc.)**

**3. Review default logic sets**

**4. Identify any missing criteria or combinations of criteria (i.e., logic sets) needed** - Are there any clinical, laboratory, demographic, epidemiologic or vital records criteria missing from this list, that are needed for your jurisdiction reporting criteria?  
 - Are there any new combinations of criteria (i.e., logic sets) needed?  
 Ex. New logic set needed for a combination of DEM+CLIN criteria

**5. Navigate to your jurisdiction specific tab and complete the following:**

**6. If your jurisdiction would like to use the DEFAULT criteria, indicate a Y in the peach box above next to "Use Default?"**

**7. If your jurisdiction would like to edit the default criteria, make edits as needed**

- Indicate all edits by highlighting the cell in YELLOW
- Types of Edits*
  - Edit existing logic sets
  - Add new row of criteria
  - Add new logic set
- Indicate all changes under "Notes"
- Answer applicable questions for your jurisdiction in the the yellow box or notes box.
- See EXAMPLE (Completed) tab for example
