

## CSTE List of Nationally Notifiable Conditions

June 2009

This list indicates the nationally notifiable conditions for which health departments provide information to CDC. It specifies the manner and time frame in which the health department notifies CDC. Local requirements for reporting to public health by healthcare providers, laboratorians and others generally include these conditions but may require reporting of additional diseases, syndromes or findings and may specify different time frames. For information on local reporting requirements, contact the city, county or state health department.

### IMMEDIATE, EXTREMELY URGENT - Notification within 4 hours

Call CDC EOC at 770-488-7100 within 4 hours; follow-up with electronic transmission of report by the next business day

| DISEASE                                                              | CASES REQUIRING NOTIFICATION      |
|----------------------------------------------------------------------|-----------------------------------|
| <b>Anthrax</b>                                                       |                                   |
| Source of infection not recognized                                   | Confirmed and probable cases      |
| Recognized BT exposure/potential mass exposure                       | Confirmed and probable cases      |
| Serious illness of naturally-occurring anthrax                       | Confirmed and probable cases      |
| <b>Botulism</b>                                                      |                                   |
| Foodborne (except endemic to Alaska)                                 | All cases prior to classification |
| Intentional or suspected intentional release                         | All cases prior to classification |
| Infant botulism (clusters or outbreaks)                              | All cases prior to classification |
| Cases of unknown etiology/not meeting standard notification criteria | All cases prior to classification |
| <b>Plague</b>                                                        |                                   |
| Suspected intentional release                                        | All cases prior to classification |
| <b>Polio</b>                                                         | Confirmed cases                   |
| <b>SARS Coronavirus</b>                                              | All cases prior to classification |
| <b>Smallpox</b>                                                      | Confirmed and probable cases      |
| <b>Tularemia</b>                                                     |                                   |
| Suspected intentional release                                        | All cases prior to classification |
| <b>Viral Hemorrhagic Fevers</b>                                      |                                   |
| Suspected intentional                                                | Confirmed and suspected cases     |

### IMMEDIATE, URGENT - Notification within 24 hours

Call CDC EOC at 770-488-7100 within 24 hours; follow-up with report in next regularly scheduled electronic transmission

| DISEASE                                                      | CASES REQUIRING NOTIFICATION      |
|--------------------------------------------------------------|-----------------------------------|
| <b>Anthrax</b>                                               |                                   |
| Naturally-occurring or occupational, responding to treatment | Confirmed and probable cases      |
| <b>Brucellosis</b>                                           |                                   |
| Multiple cases, temporally/spatially clustered               | Confirmed and probable cases      |
| <b>Diphtheria</b>                                            | All cases prior to classification |
| <b>Influenza, novel</b>                                      | Confirmed cases                   |
| <b>Measles</b>                                               | Confirmed cases                   |
| <b>Rabies in a human</b>                                     | Confirmed and probable cases      |
| <b>Rabies in an animal</b>                                   |                                   |
| Imported from outside continental US within past 60 days     | Confirmed cases                   |
| <b>Rubella</b>                                               | Confirmed cases                   |
| <b>Viral Hemorrhagic Fevers</b>                              |                                   |
| All cases other than suspected intentional                   | Confirmed and suspected cases     |
| <b>Yellow Fever</b>                                          | Confirmed and probable cases      |

### STANDARD - Notification by electronic transmission

Submit within the next normal reporting cycle (i.e., within 7 days for NNDSS conditions)

| DISEASE                                                                   | CASES REQUIRING NOTIFICATION           |
|---------------------------------------------------------------------------|----------------------------------------|
| <b>Anaplasmosis</b>                                                       | Confirmed and probable cases           |
| <b>Arboviral disease (Calif. serogroup, EEE, Powassan, SLE, WNV, WEE)</b> | Confirmed, probable, and suspect cases |
| <b>Botulism</b>                                                           |                                        |
| Infant, sporadic cases                                                    | All cases prior to classification      |
| Wound, sporadic cases                                                     | All cases prior to classification      |
| <b>Brucellosis</b>                                                        |                                        |
| Cases not temporally/spatially clustered                                  | Confirmed, probable, and suspect cases |
| <b>Cancer</b>                                                             | Confirmed cases <sup>†</sup>           |
| <b>Chancroid</b>                                                          | Confirmed and probable cases           |
| <b>Chlamydia trachomatis</b>                                              | Confirmed cases                        |
| <b>Cryptosporidiosis</b>                                                  | Confirmed and probable cases           |
| <b>Cyclosporiasis</b>                                                     | Confirmed and probable cases           |
| <b>Dengue Virus Infections</b>                                            | Confirmed and probable cases           |
| <b>Ehrlichiosis</b>                                                       | Confirmed and probable cases           |
| <b>Escherichia coli</b> , Shiga toxin-producing (STEC)                    | Confirmed and probable cases           |
| <b>Foodborne Disease Outbreaks*</b>                                       | All outbreaks <sup>†</sup>             |
| <b>Giardiasis</b>                                                         | Confirmed and probable cases           |
| <b>Gonorrhea</b>                                                          | Confirmed and probable cases           |

# CSTE List of Nationally Notifiable Conditions
