

Healthcare Associated Infections (HAI) Prevention Workshop

Sunday, June 9, 2013 – 10:00 am – 5:00 pm

This pre-conference workshop is geared toward HAI Coordinators, HAI Program Managers, and health department staff that are currently engaged or interested in HAI Prevention and Response activities. The workshop will be interactive, including health departments sharing their experiences and facilitated active dialogue among participants.

Sessions will include brief presentations and discussion on the following topics:

- States sharing their prevention efforts, topics may include the following: collaborative lessons-learned, HAIs across the healthcare spectrum, program sustainability, and communicating HAI data
- Outbreak management table top exercise (e.g., lessons learned and managing responsibilities during an outbreak)
- Next steps with NHSN data – identifying highly performing facilities and facilities who may be lagging behind, and how to work with them to maximize prevention

By the end of the workshop, attendees will have a better understanding of how HAI programs and other health department activities can provide data for action to encourage HAI elimination across the continuum of care.
