

Table 18. Number of Establishments Inspected by OSHA and Number of Workers Covered by Inspections by state and U.S., 2000

	CA ¹	CT	MA	ME	MI	NC ¹	NE	NJ	NM	NY	OR	WA	WI	US
Total number of establishments under Federal/State OSHA jurisdiction	1,026,355	107,787	187,391	44,865	260,885	222,234	48,127	270,384	44,956	529,104	109,050	221,150	145,872	7,870,222
Annual number of establishments inspected by Federal/State OSHA	10,022	997	1,590	784	6,810	3,859	291	3,332	409	4,741	5,332	7,021	1,264	91,563
Annual number of employees whose work areas were inspected by Federal/State OSHA	473,543	46,817	56,343	30,758	270,338	193,857	11,666	123,661	17,640	289,549	168,503	229,100	151,287	4,423,312

Data include both federal OSHA coverage (including federal agencies) and OSHA-approved state plan coverage (including state and local government).

Data exclude mining establishments and employees because mines are covered under the Mine Safety and Health Administration (MSHA), not OSHA.

¹Farms with ten or fewer paid employees are exempt from OSHA inspections except in these states.

**Figure 18. Percentage of Establishments under OSHA
Jurisdiction Inspected by OSHA and of Workers in
Establishments under OSHA Jurisdiction Whose Work Areas
Were Inspected by OSHA, by State and U.S., 2000**

Percentages may be slightly overestimated because multiple inspections of the same establishments are conducted by OSHA annually; however, repeat inspections are infrequent in a given calendar year.

All state-specific and national percentages exclude mining. Public sector workers are excluded from percentages in MA, ME, NE, NJ, and WI.

Denominators of all state-specific and national percentages exclude agriculture/farms except in CA and NC for the following reasons:

- It is difficult to differentiate between small (fewer than 11 employees) and large farms.
- The 2002 Census of Agriculture data indicate that most farms had 10 or fewer employees and were, therefore, not covered by OSHA.
- Few OSHA inspections of large farms were conducted according to data from several states.

¹ These states are "state plan" states, which cover both the private and public sectors.

² These states have "public sector only" state plans where federal OSHA has jurisdiction over the private sectors and state agencies have jurisdiction over the public sector.

³ The U.S. percentage is for private sector only.

*This national percentage (3.1) replaces the original national percentage (3.4) printed in "Putting Data to Work: Occupational Health Indicators from Thirteen Pilot States for 2000", published in October 2005. This new percentage was calculated using only private sector inspection data and workforce estimates.

Data Sources: Numbers of OSHA inspections and workers covered by OSHA inspections: OSHA Office of Statistics. Number of establishments and workforce estimates: [Bureau of Labor Statistics' Covered Employers and Wages \(ES 202\)](#)
